

# DRIVE THROUGH FLORIDA: AQUACULTURE AND SEAFOOD

## Food Chain

Name: \_\_\_\_\_

A **food chain** shows how each living thing gets its food energy. Some animals eat plants and some animals eat other animals. For example, a simple food chain links the plants, the herbivores and the carnivores. Each link in this chain is the food for the next link. These food chains start with plant life and ends with an animal.

**Put the following in the right order to make a food chain.**

1. Aquatic plant, fish, shrimp: \_\_\_\_\_

\_\_\_\_\_

2. Shrimp, human, alligator, fish: \_\_\_\_\_

\_\_\_\_\_

Draw a simple food chain using aquatic plants, shrimp, fish, alligators and humans.
