

VEGETABLES

A Florida Agriculture Literacy Day Book

FLORIDA AGRICULTURE LITERACY DAY

is an annual event held each spring in which hundreds of agriculture industry representatives read a designated children's book about agriculture in elementary school classrooms around the state. The event is a partnership between Florida Agriculture in the Classroom, Inc. and the Florida Department of Agriculture and Consumer Services.

FLORIDA AGRICULTURE IN THE CLASSROOM

is a non-profit organization charged with educating Florida teachers and students in kindergarten through 12th grade about the importance of Florida agriculture. It is funded by sales of the agriculture specialty license plate known as the "Ag Tag." Florida Agriculture in the Classroom is able to provide Agriculture Literacy Day books and other related items free of charge because of the funding it receives from the Ag Tag.

MOVING THE TOMATO **CROP, 1921**

In the 1800s, Florida farmers started to send tomatoes by railroad or boat to the north.

Now we send fresh tomatoes all over the United States, and to Canada and other countries.

We grow so many tomatoes in Florida that if you harvested them all at the same time they would weigh more than one billion pounds.

Tomatoes love our sunshine! We grow them in the winter months when it is too cold in many other states.

With all this sunny weather, Florida grows many different kinds of tomatoes - small, medium and large.

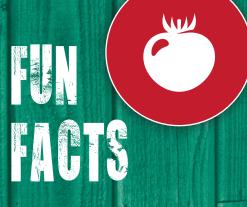

And the more sun the tomato gets, the sweeter it is!

FLORIDA TOMATOES ARE GROWN ON BETWEEN

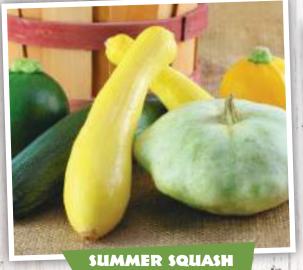

AMERICANS CONSUME OF ALL TOMATOES AS SAUCES, SALSAS

FRUIT, BUT COOKS CALL THEM A VEGETABLE.

Did you know that a flower can be a male or female? Squash plants have male and female flowers on the same plant. They must be pollinated and growers pay beekeepers to have bee colonies do the work!

There are different types of squash – winter and summer. Both winter and summer squash can be grown in Florida but we grow more summer squash than winter squash.

Did you know that the pumpkin is in the same family as the yellow squash? And many pumpkin pies are made from winter squash. What would Thanksgiving be without them!

FROM WINTER SQUASH CAN BE USED AS CONTAINERS.

SQUASH COMES IN MANY

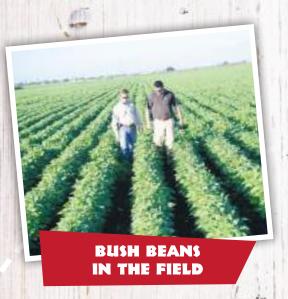

TAN, PURPLE, BLUE, WHITE, GREEN AND ORANGE.

THERE ARE OVER DIFFERENT TYPES OF SQUASH.

WINTER SQUASH

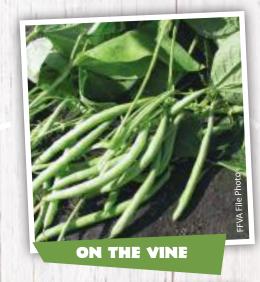

Snap beans like to grow in loamy soil and hot weather. South Florida has plenty of those two things. There are two common types of snap beans: bush beans and pole beans. Bush beans are planted in rows and pole beans are planted against a teepee so they can climb. But in South Florida we grow mostly bush beans.

Have you ever eaten green bean casserole on Thanksgiving? I bet you didn't know that fresh Florida snap beans are used for Thanksgiving dinners all over the country!

Do you like corn at summer barbeques?

When the first Spanish and French settlers came to the new world they learned how to grow Indian corn or maize from the American Indians.

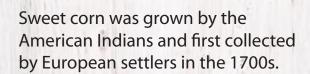

PALM BEACH

FARMER WITH CORN CROP IN PANAMA CITY, FLORIDA 1915

By the 1800s most Florida settlers grew their own corn to feed themselves and their livestock.

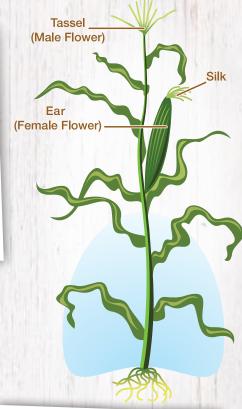

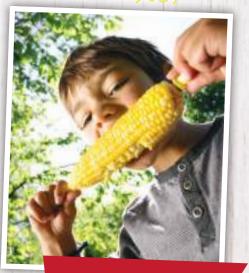

In the past, sweet corn was not really that sweet. But plant breeders have worked hard to make sweet corn, sweeter.

Today, most corn grown in Florida is super sweet corn. We are very lucky because super sweet corn likes our muck, sandy or limestone soils.

We grow so much sweet corn because of our ideal growing conditions that Florida is the number one producer of it in the United States.

IT TASTES GREAT!

So enjoy all the sweet corn that you like, we have plenty.

Lettuce is another great Florida vegetable that keeps us healthy. Without it we wouldn't have salads to eat and sandwiches would not crunch when we take a

There are two types of lettuce: non-heading and heading lettuce. Florida farmers grow more nonheading lettuce.

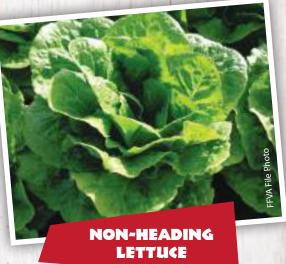

bite. That would not be much fun.

Romaine and leaf lettuce are grown the most in Florida. These are non-heading lettuces. They like Florida's warmer weather and have lots of vitamins.

lceberg lettuce is a heading variety of lettuce. These types of lettuces get their name because they are shaped like your head.

Farmers use over 9,900 acres of land from 87 different farms to grow all the different kinds of lettuce. That's a lot of lettuce!

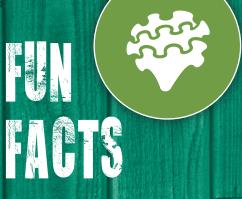

HEADING LETTUCE

AMERICANS EAT

AND MINERALS THAN THE PALER COLOR VARIETIES.

A bell pepper may look like a bell, but it does not sound like a bell. Bell peppers get their name because they have three or four lobes on the bottom and a handle like a bell.

You can eat them fresh, grilled, pan-fried or stuff them with meat or rice for baking.

PALM BEACH --

Do you know that a green, yellow, and red bell pepper are all the same pepper? Peppers get sweeter and milder tasting as they change in color from green to red and get riper on the plant.

When green, yellow and red peppers are sold together what do you think we call them? That's right we call them "traffic light" peppers!

Farmers plant bell peppers from July to February, but they do not like real hot weather. Bell peppers are usually harvested between November and May.

Our farmers harvest more than 350 million bushels of peppers each year, which makes us number two in the nation. It takes a lot of people to get our bell peppers to the supermarket.

BELL PEPPERS ARE
COUSINS
TO PIMENTOS AND
KAYENNE PEPPERS.

PAPRIKA IS A SPICE MADE

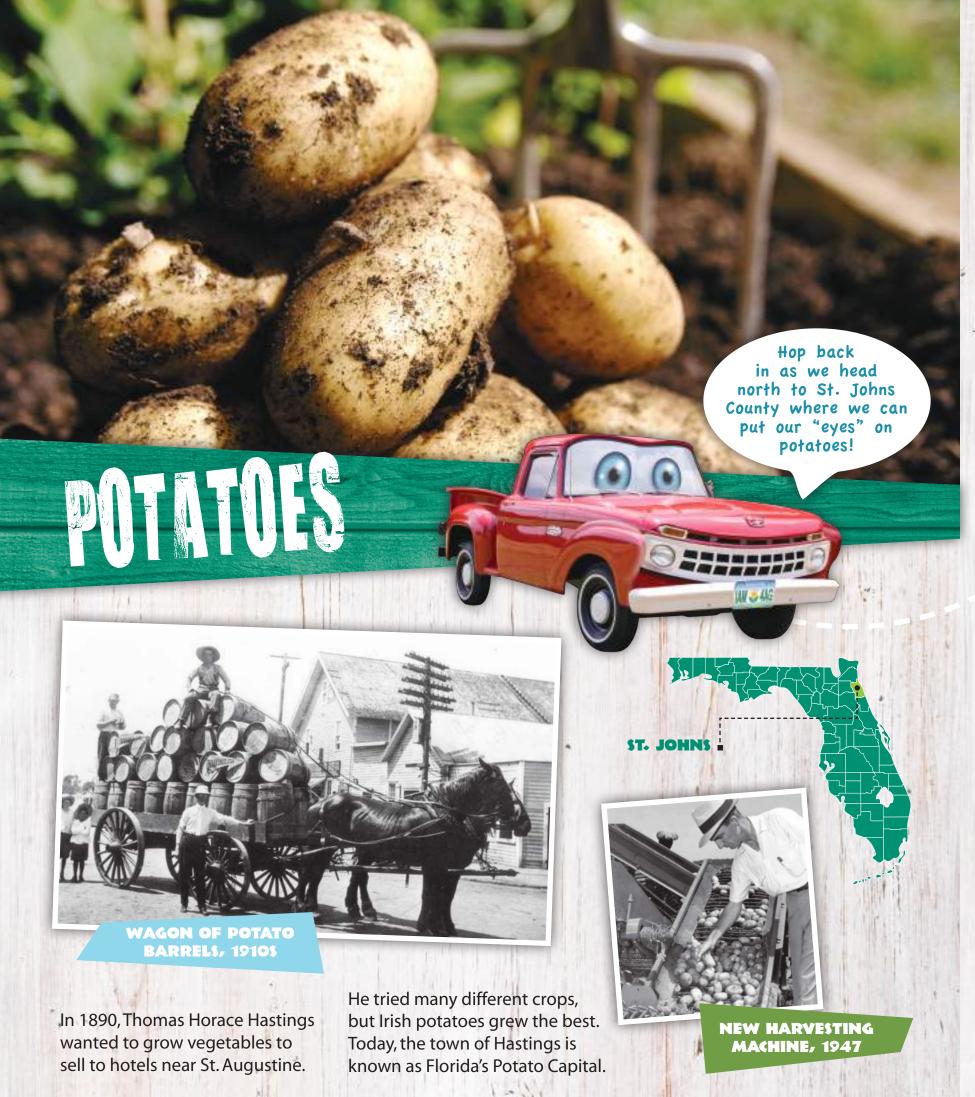

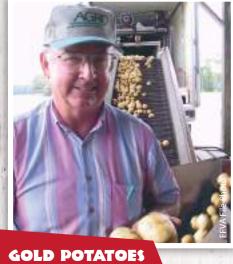

PEPPERS

CAN ALSO BE BROWN, PURPLE, MAROON OR WHITE.

There are many varieties of potatoes, usually with red, gold or white skins.

Potatoes grow underground during cooler weather as tubers at the ends of stems. They are grown for both the fresh market and to make potato chips.

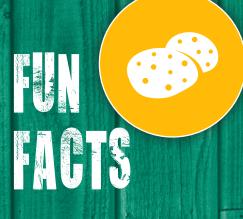

Lots of people like potatoes, and Florida farmers harvest over 35,000 acres of potatoes each year. That's about 26,000 football fields!

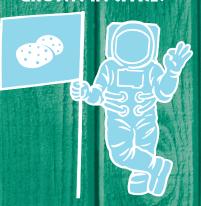

What do we do with all those fresh potatoes? We make potato salad, baked potatoes, mashed potatoes, French fries... I could go on and on.

THE POTATO WAS THE

GROWN IN SPACE.

cabbage on nearly 9,000 acres.

Why do some people say they are "as cool as a cucumber?" Cucumbers are about 96 percent water, which will keep you very cool.

Cucumbers grow on vines. They need a lot of space to spread out and need to be watered every week.

CUCUMBERS

Cucumbers are grown on 337 Florida farms using a total of 10,000 acres of land. Many of these farms are in Palm Beach County. Cucumbers are eaten fresh and are also used to make pickles.

AND PACKING

and cabbage.

Celery takes six months to grow. It spends the first three months in a greenhouse and then three months in the field. That's a long time to wait, but farmers think it's worth it. It grows best on the shores of Lake Okeechobee, in South Florida in an organic soil called muck.

Florida farmers plant celery so it can be used in stuffing and special salads during the winter holidays – or eaten with peanut butter or cream cheese year round. It's a healthy snack. In fact, celery has been used to help sick people with stomach aches, colds and much more.

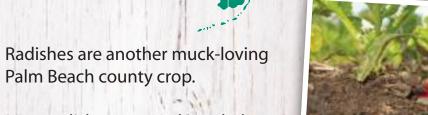

PALM BEACH

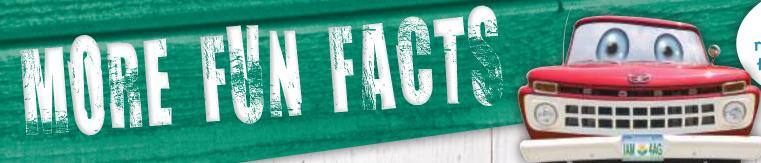

Most radishes are used in salads, they have a crunchy, peppery

RADISHES ARE THE ROOT

they have a crunchy, peppery taste and are usually small, round and red. They look like tomatoes with tails! But radishes can also be white or purple. Radishes are the roots of the plants so they are grown underground.

Farmers plant 6,000 acres of radishes each year. Radishes are fast growers and can be harvested in three to six weeks after planting.

Please help me remember all of these important facts!

BELL PEPPERS

can be green, yellow or red. You can eat them fresh, grilled, pan fried or stuffed for baking.

We've come to the end of our trip. Now you know some yummy vegetables that grow in Florida and how they are used in many of our favorite dishes. Be sure to look for "Fresh From Florida" vegetables at the grocery store, farmers markets and in restaurants. See you next year!

DEFINITIONS

ACRE: A unit of land area equal to 4,840 square yards.

bees, including a queen bee, and in the summer, hundreds or thousands of worker bees that cooperate in nest building and food collection.

BENEFIT: Something good, an improvement.

BUSHEL: A unit of measure equal to 64 US pints (35.2 liters), which is used for dry goods.

CAPITAL: The most important city or town of a country or region, usually its seat of government and administrative center.

CASSEROLE: A mix of food baked and served in a deep dish.

COMMERCIALLY: A word used to describe items that are bought and sold by businesses.

CONSERVING: Using or managing (natural resources) wisely.

COLONISTS: A group of people who leave their native country to form a settlement in a new land.

CONDITIONS: The way things are at a certain time or in a certain place.

varying successive crops in a definite order on the same ground, especially to avoid depleting the soil and to control weeds, diseases and pests.

DESCENDANT: A plant or animal that is related to a particular plant or animal that lived long ago.

GREENHOUSE: A building with a transparent roof and walls for growing plants.

LIMESTONE: A sedimentary rock consisting mostly of calcium carbonate, which often includes the organic remains of sea animals, mollusks and corals.

LOAMY: A rich, soil containing an equal mixture of sand, silt and clay.

LOBE: A roundish projection or division, as of an organ or a leaf.

MAIZE: A tall annual grass that is cultivated for its yellow edible grains, which develop on a spike. Also called Indian corn.

MUCK: A rich dark or black soil made from drained swamplands.

PLANT BREEDER: An individual who studies and practices the science of changing the traits of plants for desired results.

POISONOUS: A substance that is harmful or destructive and can cause injury or death to a person or animal by entering the body.

POLLINATED: Pollen has been transferred from a stamen to a pistil of a flower, or from a male cone to a female cone.

PRODUCTION: Total output of goods.

SANDY: Full of or covered with sand.

TEEPEE: A tent shaped like a cone.

TUBER: A short, thick, round stem that is a part of certain plants (such as the potato), that grows underground, and can produce a new plant.
